

Pregis

Protective Packaging Solutions

A SYSTEM DESIGNED TO REVOLVE AROUND YOUR NEEDS

Pregis' proprietary technology now makes it possible to produce several different inflatable pillow patterns on one machine to accommodate wrapping and void fill requirements. Pregis' **AirSpeed® AXIS™** machine is coupled with the new line of **AirSpeed HLX™ hybrid low-density polyethylene void fill pillows** to create the perfect crossover solution.

THE AIRSPEED **AXIS** SYSTEM

The AirSpeed Axis machine produces inflatable pillows that are designed for void fill and wrapping. The Axis system provides the same high speed, reliability and delivery system compatibility you've come to expect from Pregis systems. The AirSpeed Axis has been designed to incorporate high performance sealing features and run multiple pillow patterns.

- Produces AirSpeed **HLX** hybrid wrappable void fill pillows as well as traditional void fill pillows
- Is ideal for high-volume distribution center operations and other locations that package products with varying height / weight profiles
- Allows users to easily switch from one pillow pattern to another with a quick roll changeover
- Minimizes training requirements as users only need to be trained on one machine, instead of multiple systems
- Simplifies equipment maintenance process
- Supported by Pregis' proprietary PX3 field service platform

In other words, the AirSpeed Axis has been designed to **revolve around your needs!**

AIR SPEED[®] HLX[™] HYBRID VOID FILL

AirSpeed HLX hybrid void fill pillow patterns feature channels which allow them to **bend and curve around products or edges to fill small, medium or large voids while cradling** the product to protect it as it safely travels through the logistics pipeline.

The AirSpeed HLX hybrid void fill patterns include:

HLX Trio: Features three cushions per row. The HLX Trio pattern is **ideal for smaller voids** and **reducing dimension weight**.

HLX Small Cradle: A quilted design cradles the product forming a protective cushion for small items and voids.

HLX Large Cradle: A quilted design provides **cradling for bigger items and voids**.

HLX High Yield: Two, larger connected pillows offer **higher roll yield** to fill bigger void spaces. **Great option for top filling a box!**

Small Cradle

High Yield

AirSpeed HLX hybrid void fill pillows are produced using Pregis' **proven EP-Flex[™] low density polyethylene film**. EP-Flex film has **excellent tensile strength** and **resists puncturing** by stretching when pressure is applied.

Like all AirSpeed inflatable packaging products, the HLX hybrid void fill pillows are a great solution for customers looking for a **cost effective and environmentally responsible** packaging solution.

- Lightweight packaging medium to reduce freight cost
- Proprietary resin blend provides maximum strength while minimizing the PE resin content
- Recyclable as a category #4 (where accepted) ♻️
- Bulk pack options to eliminate cartons and reduce the amount of pallets and cores used
